## Environmental Policy Statement

### Environmental Protection Act 1990

This policy is applicable to all business activities undertaken and managed by the Company and therefore will impact upon our key suppliers and customers.

The Board of Directors are fully committed to minimising the “environmental impact” of our business activities and in so doing we consider this will be best achieved through our commitment to the following aspects:-

- \* Achieving compliance with The Environmental Protection (Duty of Care) Regulations 2003 and any other relevant statutory requirements.
- \* Monitoring and reviewing the “environmental impacts” of all our activities, endeavouring to reduce our overall “environmental impact”, preventing pollution by adopting best practice.
- \* Encouraging and involving all our employees in our environmental management programme, where required providing essential training, guidance and information to allow them to fully participate and achieve their responsibilities.
- \* Sustain a programme for continuous improvement in environmental performance, by including monitoring systems that are specific, measurable, achievable, realistic and timely.
- \* Engage with and encourage our key suppliers to participate and support our commitment to developing best practice.
- \* Seek through “measurement and monitoring” improvements in energy, resources, and waste efficiencies.

Mark Hancock  
Managing Director
